

OR ordering

HOTELS · BEACH BARS · RESTAURANTS

They scan. They order. You sell more.

QR self-ordering that works alongside the system you already have — or fully standalone.

THE PROBLEM

Every minute of waiting is lost revenue.

- ✗ The guest waits to be noticed by a waiter — and often doesn't order again.
- ✗ At peak, orders get lost or muddled in the noise.
- ✗ With tourists, the language barrier kills upselling.
- ✗ Handwritten orders = mistakes in the kitchen and on the bill.

THE SOLUTION

One app. **Zero waiting.**

The guest scans the QR on the umbrella, in the room or at the table, sees the menu with photos and orders on their own – in seconds.

● Alongside the system you already have

● Or 100% standalone

HOW IT WORKS

From the QR to the kitchen, in seconds

01

Scan the QR

On the umbrella, in the room or at the table.
No app, no install.

02

Order & pay

Room charge, card or cash — whatever fits
the venue.

03

Reaches everywhere at once

Kitchen & bar displays, waiter PDA — and, if
you want, your POS.

WHAT'S INCLUDED

One system for the whole operation

Kitchen & bar displays

Every order splits automatically per station, in real time.

Waiter PDA

Take, update & deliver the order from their hand.

Guest self-ordering

Menu with photos, multilingual, with per-item notes.

Instant price changes

Change a price or item and it's live at once — no reprinting.

Hours & seasonality

Set operating hours per station; outside hours it closes automatically.

Multiple locations

Beach, restaurant, room service — from one management point.

THE BIG DIFFERENTIATOR

Works with what you have — or on its own

Alongside your system

Already have a POS or PMS? GooServe connects and forwards orders for billing — the displays & alerts run in parallel.

100% standalone

Have nothing? GooServe runs the entire ordering & service flow on its own — no other software.

The displays and the waiter always work — even if the POS goes down. Service never stops.

WHY YOU SELL MORE

Immediacy drives revenue

Zero waiting

The guest orders the moment they want to – more often, more easily.

Visual upselling

Photos & suggestions that sell on their own.

No language barrier

Multilingual menu – the tourist orders with ease.

Fewer mistakes

Written order in the kitchen – correct billing, fewer remakes.

SAME SYSTEM, EVERY VENUE

Everywhere you serve

Beach bar

One QR per umbrella. The guest orders from the sunbed, the waiter knows exactly where.

Hotel

Room service & beach with room charge via PMS or standalone.

Restaurant / café

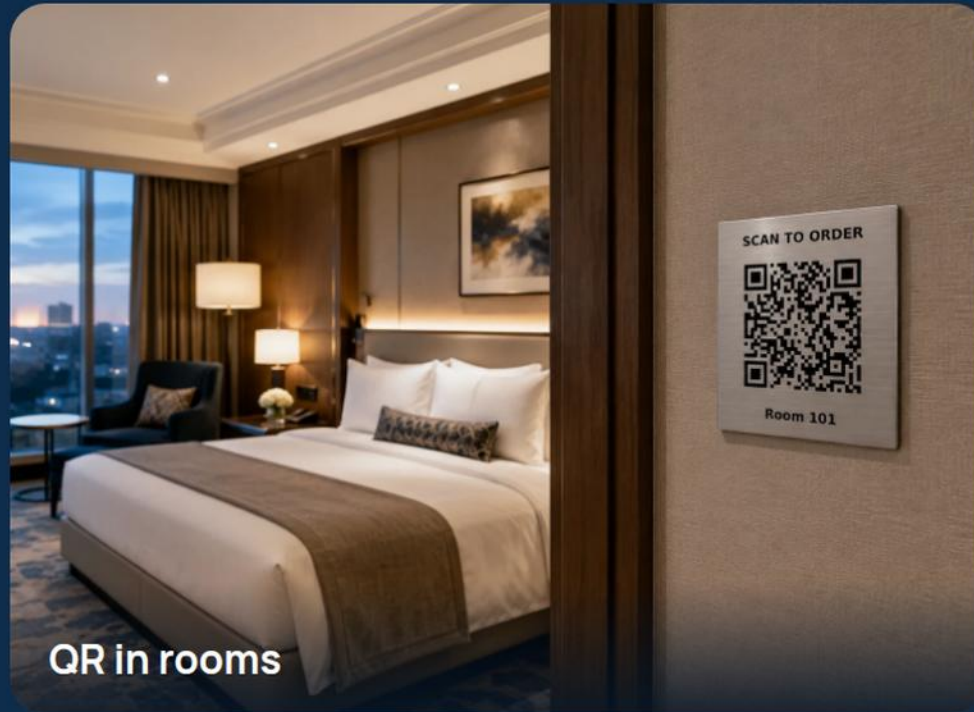

QR at the table, pay on the spot by card or cash.

IN ACTION

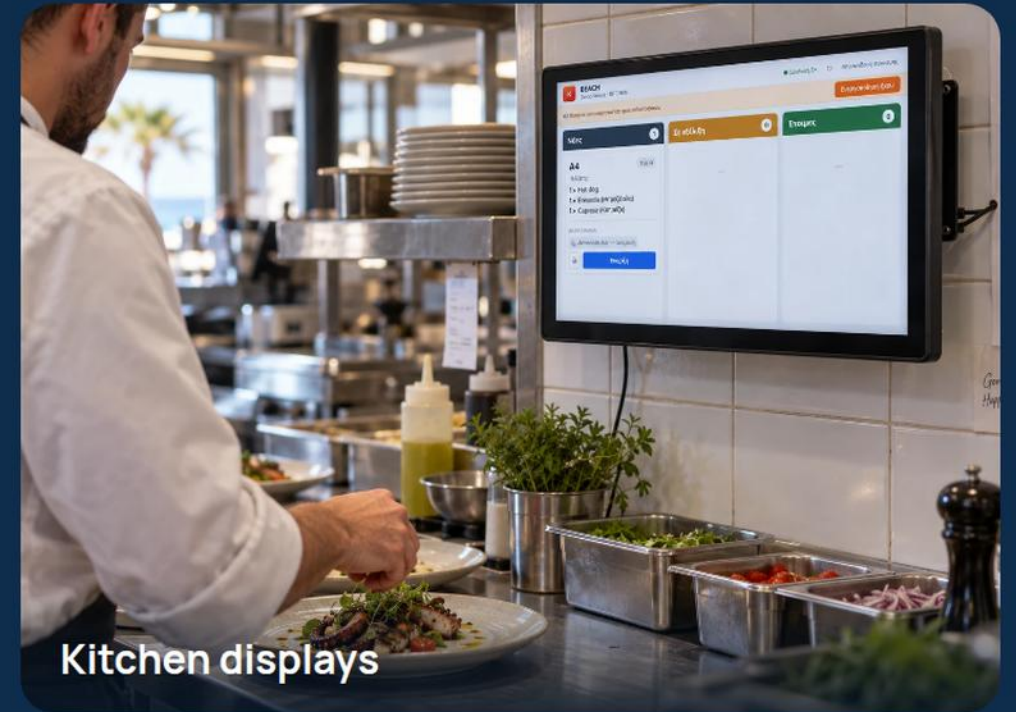

See the system in action

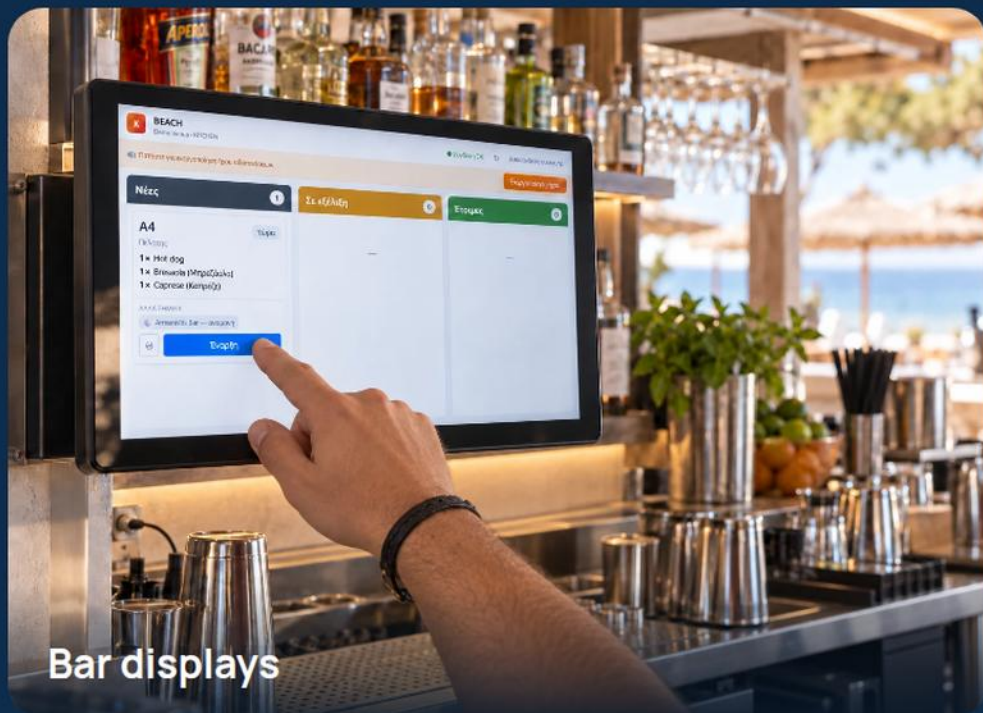

QR on umbrellas

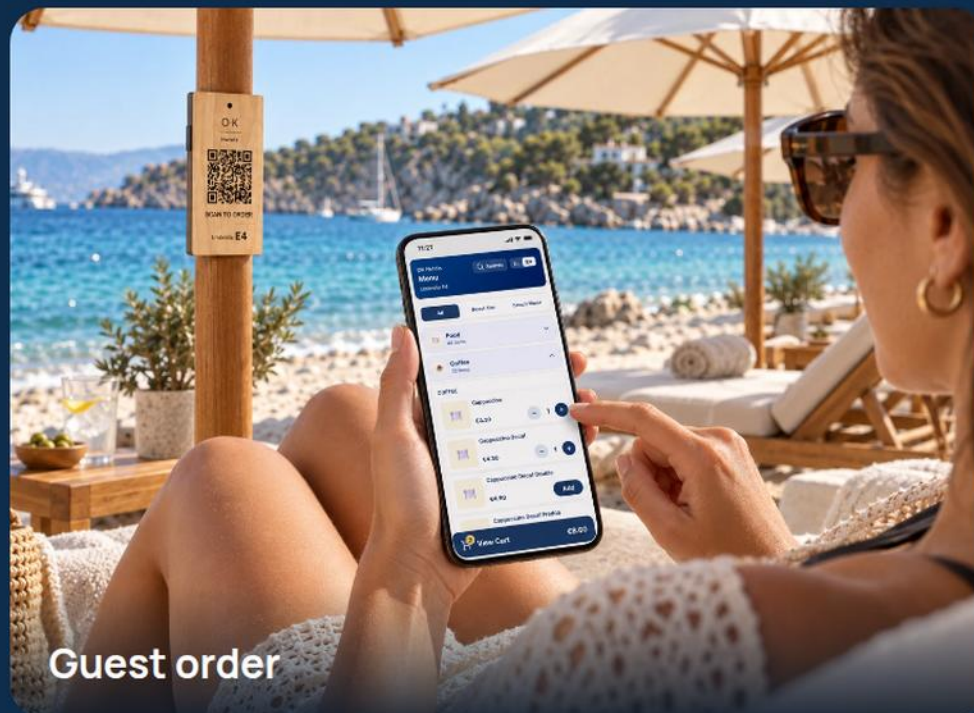

QR in rooms

Kitchen displays

Bar displays

Guest order

Waiter with PDA

What standalone mode does today

- ✓ Runs the entire ordering & operation (menu, displays, waiters) completely on its own.
- ✓ The legal receipt is issued by the venue's cash register or via a certified MyData provider.
- ✓ On our roadmap: our own billing layer (room posting to PMS, cards, MyData) for full autonomy.

LET'S START

Show it to your clients.

Request a demo — we set it up for your venue.
